## PROFESSIONAL SUMMARY

Backend developer working in **Go** and **Python**, focused on production APIs and LLM integration (**RAG**, **MCP**, multi-provider orchestration). Built six systems of my own applying clean architecture, asynchronous queues with retry policies, JWT/RBAC authentication, automated testing and containerised CI/CD deployment.

Previously **14 years with the Argentine Navy**, responsible for maintaining and repairing navigation radar systems under mission-critical conditions while leading a technical team. I bring systematic troubleshooting under pressure, on-call discipline, rigorous documentation and a zero-failure mindset.

## TECHNICAL SKILLS

**Languages:** Go (primary), Python, TypeScript, JavaScript
**Frameworks:** Fiber, FastAPI, Flask, Express.js
**Applied AI:** LangChain, LlamaIndex, RAG, ChromaDB, LLM orchestration, MCP, embeddings, agents, n8n
**Databases:** PostgreSQL, MongoDB, Redis, SQLite, vector databases
**ORM and data:** Prisma, SQLAlchemy, sqlx
**DevOps:** Docker, Docker Compose, GitHub Actions (CI/CD), Linux
**Architecture:** Clean Architecture, REST APIs, JWT/RBAC, async processing, message queues
**Testing:** PyTest, endpoint and validation-logic coverage
**Tools:** Git/GitHub, VS Code, Jira, Trello, Confluence, Notion
**Methodologies:** Agile (Scrum / Kanban)

## PROFESSIONAL EXPERIENCE

### Independent projects · Buenos Aires

*Backend Developer* | 2022 – present

*Design, development, testing and deployment of my own backend systems, with public source code on GitHub.*

#### Engine API Workflow — Workflow automation engine

*Go (Fiber) · MongoDB · Redis · Docker · GitHub Actions*

github.com/DanielP41/Engine_API_Workflow

- Automation API with multi-step pipelines and scheduled triggers.
- Endpoints secured with JWT, RBAC, refresh tokens and per-user rate limiting.
- Asynchronous job processing over Redis queues, including a retry policy.
- Audit logging, metrics, real-time statistics and health checks.
- Clean layered architecture: handlers, services, repositories and models.

#### RAG Document API — LLM-assisted document search

*Python (FastAPI) · LangChain · ChromaDB · Docker · PyTest*

github.com/DanielP41/API-RGA

- Multi-provider RAG API supporting OpenAI, Anthropic, DeepSeek and Ollama.
- Asynchronous ingestion of PDF, TXT, Markdown, EPUB and Excel documents.
- HuggingFace embeddings running locally: zero per-token cost and data kept in-house.
- Real-time dashboard with drag-and-drop upload and chat over indexed documents.
- PyTest coverage across all endpoints and validation logic.

#### Dev Environment Snapshots — MCP server

*Go · SQLite · Win32 API · MCP*

github.com/DanielP41/Snapshots-MCP-Server

- MCP server to capture, restore and diff development environment states.
- Native Win32 API integration without CGO for window management; SQLite persistence.

#### Residence Eclat — Room rental management

*Node.js · TypeScript · Express.js · Prisma · PostgreSQL · JWT*

github.com/DanielP41/ResidenceEclat

- Rental system with availability views and an administration panel.
- REST backend in Express and TypeScript on top of Prisma ORM.
- Access secured with JWT, input validation with Zod and layered middleware.
- Organised into controllers, services, middleware and routes.

### Additional projects

**Moto-Repuestos — Inventory management —** *PostgreSQL 16, Docker.* Relational schema for inventory, sales, warranties and clients; 5 triggers, 4 views and 13 indexes for reporting and query optimisation. github.com/DanielP41/motorespuestos

**REST API Task Manager —** *Go, PostgreSQL, sqlx, GitHub Actions.* Modular REST API with idiomatic Go layout and a CI/CD pipeline for testing and deployment. github.com/DanielP41/API-REST-Golang

**Argentine Navy** · Argentina

*Electronic Repairs Supervisor — Navigation Radar Systems* | 2011 – 2025

- Led a technical team repairing mission-critical navigation radar under tight deadlines and at sea.
- Reduced equipment downtime through systematic fault diagnosis and scheduled preventive maintenance.
- Delivered zero-failure operation of navigation equipment across deployments.
- Produced technical procedure documentation, intervention records and fault traceability.
- Promoted four times, from Radar Assistant to Electronic Repairs Supervisor.

## EDUCATION

**Senior Electronic Technician**

Argentine Navy Petty Officers School — specialised in navigation radar

**Continuous self-directed training**

Backend development, software architecture and applied AI, 2022 – present

## CERTIFICATIONS

*Completed between January and August 2026.*

### Applied AI and LLM development — Anthropic

- Building with the Claude API — May 2026
- Claude Code in Action — May 2026
- Model Context Protocol: Advanced Topics — August 2026
- Introduction to Agent Skills — May 2026
- Introduction to Subagents — May 2026
- Claude Code 101 — May 2026
- AI Fluency: Framework & Foundations — May 2026

### Automation and technical English

- n8n Course: No Code AI Agent Builder — Simplilearn SkillUp, January 2026 · code 9706214
- English for IT 2 (CEFR level B2) — Cisco Networking Academy / OpenEDG, January 2026
- Introduction to Cybersecurity — Cisco Networking Academy, January 2026

## LANGUAGES AND AVAILABILITY

Spanish (native) · English **B2, certified** (English for IT 2, Cisco Networking Academy / OpenEDG)

Immediately available · Remote, hybrid or on-site in Buenos Aires
